

SAFEAWAKE

Every 3 hours in the U.S. someone dies in a fire. Fires kill or injure 17,000 Americans every year. Deaf and hard-of-hearing people are at especially high risk from fires and fire-related injuries because they cannot hear normal smoke alarm signals. The **SAFEAWAKE** alert system *activates within seconds* of sensing a smoke alarm and instantly initiates a high-decibel 500Hz audible signal, a flashing white light *and* an intermittent, motor-driven bed shaker which vibrates the bed to awaken the sleeping. All 3 alarms are synchronized to the T-3 alarm pattern. In tests conducted at a Johns Hopkins affiliated Sleep Laboratory, the **SAFEAWAKE** alert system was 100% successful in awakening people in response to a smoke alarm. Early notification is your most important key to surviving a fire. Ensure your survival. Call or e-mail **SAFEAWAKE** and receive more information on the patented **SAFEAWAKE** technology for you or a family member.
